

**INDUSTRY KNOWLEDGE**

Smonik principals have over 50 years of investment operations experience.

**POWER TO THE USER**

User's can configure recons, setup file retrieval and transform data all in the User Interface. No development required.

**MORE THAN RECON**

Smonik is more than a Recon system. Use Smonik to retrieve files for any purpose and for numerous data verification processes

**STANDARD CONNECTORS**

Smonik works with and supports all of today's industry standard:

- Accounting systems
- Custodian Files
- Data Providers
- Prime Brokers

**PRODUCT COMMITMENT & GLOBAL REACH**

***Smonik Releases New PDF Extraction Tool***

**Smonik** has simplified the extraction of data from PDF documents and integrated this data with the existing Smonik product line.

**PDF Extraction** is now available in the Smonik suite of products. This tool simplifies the extraction of data, both structured and unstructured, from PDF files and allows the user to apply any type of data transformation for use in downstream applications. A user can easily create a one-time mapping of a PDF document in the User Interface with no development required. In a few simple steps the document can be mapped to extract only the data you require.

The PDF document can be retrieved from an email message, an FTP site or a folder within the client environment. Files can be retrieved using an automated schedule which can then be monitored in the Smonik Control Center. After the one-time scheduling and the one-time mapping, the process is straight-through for all future occurrences. The extracted data can be used as part of a reconciliation process or saved and imported to any downstream system.

Best of all the user is in control of the mapping and how to handle the data. There is no need for custom development as the structure of the PDF documents change. For each new style of document simply map the data you want to extract, one time, and every time that file is retrieved the data will be extracted; data that can be filtered, transformed or managed to facilitate downstream applications.

Extracting data from capital statements, capital call notices, distribution notices or confirms (all typically provided in PDF format) just became easy!
